EDUCATION

The University of Texas at Austin – McCombs School of Business

May 2026

Master of Science, Business Analytics – GPA 3.84

The University of Texas at Austin – McCombs School of Business

May 2025

Bachelor of Business Administration, Business Analytics – GPA 3.79

- Minor: Media and Entertainment Studies, Analytics & Business of Sports

TECHNICAL SKILLS

- Programming Languages: Python, SQL, R
- Analytics & BI: Power BI, Tableau, Streamlit, Google Analytics, MS Office Suite, Excel
- Developer Tools: Jupyter, Google Colab, VS Code, Git, Docker, OpenTelemetry, Prometheus
- Cloud & Databases: AWS, Snowflake, BigQuery, Supabase
- Certifications: Front Office Sports Modern Ticketing Essentials: Beyond the Ticket, PowerBI Essentials

EXPERIENCE

Cisco – Business Analyst Intern; Austin, TX

January 2026 – May 2026

- Instrumented internal production AI agent (Google ADK) with OpenTelemetry logging custom metrics to validate usage
- Defined 5+ Prometheus metrics including tool error rates and LLM token usage, tracking agent performance in Grafana production dashboards

iHeartMedia – Data Analyst, Promotions Team; Austin, TX

September 2023 – July 2025

- Developed 2 Power BI dashboards to analyze Q1 2025 Instagram engagement across 10 accounts (5k+ followers each), surfacing content trends that informed promotional and on-air strategies
- Produced reports summarizing three \$10k+ campaigns tracking reach, impressions, and engagement for B2B Sales team supporting client retention
- Analyzed audience engagement across 50+ live promotional contests and events, identifying participation patterns that informed event format and scheduling decisions

ACADEMIC PROJECTS

Secondary Ticket Demand Forecasting Project – Personal Project

December 2025 – February 2026

- Engineered an automated BigQuery pipeline processing 7.5M daily snapshots across 138K events and 14K venues; classified events into 38 subcategories and 7 demand segments, powering Tableau and Streamlit dashboards tracking sales velocity, pricing trends, and segment performance
- Improved forecast accuracy by 27.8%, extracting 62 predictive features including venue history, competition metrics, and performer momentum
- Published a 13-part technical blog series documenting the project

Austin Concert MCP Server – Personal Project

February 2026

- Deployed a production MCP server using FastMCP, exposing concert discovery tools to a Google Gemini agent with automatic function calling across Ticketmaster, Spotify, and Setlist.fm APIs
- Implemented multi-tier caching, a 4-model Gemini fallback, and Supabase persistence for session tracking and deployed to Streamlit Cloud with 8,722 events ingested on first run

VOLUNTEERING

SIL Global – (Language Development NPO) Data Analysis, Visualization

April 2025 – Present

- Developed and maintained two AWS QuickSight dashboards to monitor data quality and track progress of global language development projects, enabling stakeholders to quickly identify and resolve errors
- Standardized 2K partner organization name entries submitted as free-form strings using Python fuzzy matching (RapidFuzz) and regex pipelines, building an entity hierarchy to support accurate relationship mapping
- Validated metadata outputs against project requirements during PreservicaAPI integration, improving data accuracy for international reporting
